

Bring clean energy to your neighborhood today.

Seize the opportunity

As energy consumers and suppliers look to control increasing energy costs and adopt more clean energies, the need for reliable, cost effective, clean energy solutions is skyrocketing. To meet these needs, the Clean Energy Collective (CEC) has created an innovative solution that allows suppliers and consumers alike to benefit from affordable clean energy ownership, *making community-based clean energy a reality*. This represents a tremendous opportunity for clean energy developers, entrepreneurs, utilities, government agencies and community organizers to bring clean energy to the masses. Solar growth alone is increasing at a rate of 100% each year and serves a market that is significantly smaller than that served by community-based solutions. However, with each opportunity there are great challenges, and community-based clean energy is no exception. Whether you are stepping into clean energy for the first time or a seasoned pro, we are your turnkey solution to achieving clean energy success.

Customers benefit from it. We make it work. You get the credit.

It's smart. In cooperation with local utilities and development partners, the CEC builds, operates and maintains clean energy facilities (*solar, hydro, wind, geothermal and biomass*) that are collectively owned and benefit local utility customers. **It's cost effective.** Facilities are sited for peak performance and costs are minimized through bulk purchasing, pushing paybacks higher than ever. **It's easy.** The CEC's turnkey partner program and RemoteMeter™ make the deployment of community-based clean energy a snap.

Bring clean energy to your neighborhood today.

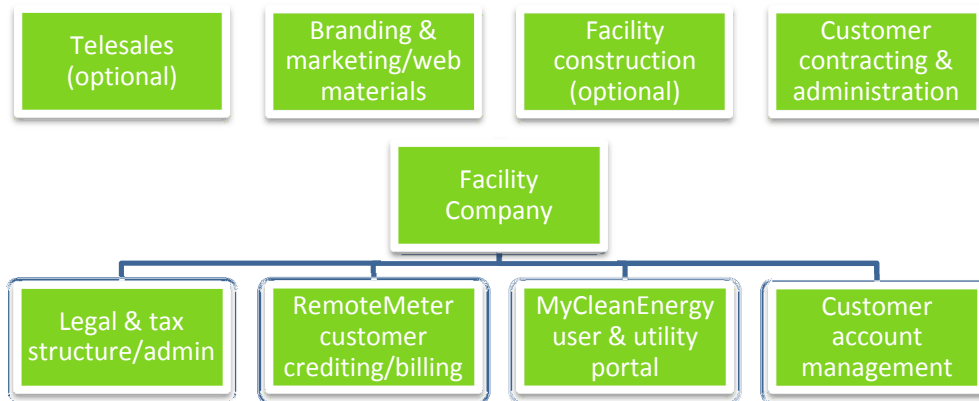

Many moving parts

The CEC allows all community members to benefit from fractional ownership in a community-based facility, such as a solar farm, and to be credited directly on their utility bill for all the energy produced. However, in order to successfully develop such a facility, several details must be considered including: legal and tax structures – including securities laws, net metering and/or power purchase agreements or feed-in tariffs, customer contracts and rebate processing, operation and maintenance procedures, specialized accounting and bill crediting software, ongoing customer administration, and finally cost-effective material purchasing and construction – not to mention branding, sales and marketing materials and tools to quickly sell-out clean energy facilities. Luckily you don't have to be concerned as the CEC provides all of these services in a one stop, turnkey solution.

Partner

CEC

We make it simple with a mutually beneficial partnership

The Clean Energy Collective seeks mutually beneficial partnerships, whereby utilities, government agencies, nonprofits/community organizations, clean energy developers and entrepreneurs bring their local knowledge, expertise and assets to the table. The CEC provides the missing tools and services in a cohesive package, ensuring that your efforts yield successful community-based clean energy facilities. Whether you are looking for a low-cost clean energy solution for your area or a profitable business venture into the clean energy industry, the CEC has you covered. So, what are you waiting for? *Bring community-based clean energy to your local area today!*
